Ecological Problems in the Continental United States

Endangered Species and Conservation Efforts

Maine In the past 5 years local land trusts have lead the way to a successful ecological conservation management with relatively low endangered species. Pennsylvania This state has succeeded in running a successful conservation program with low amounts of endangered species. Legend # of Threatened and **Endangered Species** 91.00 - 435.00 28.00 - 91.00

California

This state has seen a growing frequency of wildfires and droughts, causing much destruction There has also been damage to the coast. Due to the increase in species loss the state has chosen to increase conservation efforts and habitat renewal.

Texas

Miles

Many lakes now ban fishing due to the high amounts of chemical pollution in rivers and lakes. Health problems have even resulted from eating fish from these areas.

Florida

The state is home to the largest habitat restoration project in the country. Due large ecological damage in the Everglades the state has decided to start devoting larger portions of land to conservation.
