

Each site includes information about some of the major materials found. This information is and does not imply that one group is more advanced than another.

The Americas have a history that stretches over 20,000 years. Since their first settlement by humans, North and South America have been home to of the most culturally and linguistically diverse areas on the planet. These sites reflect a small portion of that diversity as represented in intro archaeology courses at UW-Madison, including Anthro 100, 102, 212, 321, and 322.

ARCHAEOLOGICAL SITES OF THE AMERICAS
