

Historical and Current Prevalence of CWD in Deer

Positive Test per 1,000 Analyzed 1999-2019

Number of Positive Tests in 2019

What is CWD?

CWD stands for Chronic Wasting Disease. CWD affects the deer population in Wisconsin. It is always fatal towards the deer when contracted. It was first discovered in Wisconsin in 2002. It causes a degeneration of the brain. Contact your local DNR office if you spot a deer with these symptoms. No cases of CWD have been reported in humans.

Symptoms

- Emaciation
- Excessive Drinking
- Excessive Urination
- Abnormal Behavior
- Loss of Bodily Functions
- Death
