

THE HISTORY OF CARTOGRAPHY

VOLUME 4

Cartography in the European Enlightenment

Edited by Matthew H. Edney and Mary Sponberg Pedley

Published by the University of Chicago Press

Since its launch in 1987, the *History of Cartography* series has garnered critical acclaim and sparked a new generation of interdisciplinary scholarship. *Cartography in the European Enlightenment*, the highly anticipated fourth volume, offers a comprehensive overview of the cartographic practices of Europeans, Russians, and the Ottomans, both at home and in overseas territories, from 1650 to 1800.

The social and intellectual changes that swept Enlightenment Europe also transformed many of its mapmaking practices. A new emphasis on geometric principles gave rise to improved tools for measuring and mapping the world, even as large-scale cartographic projects became possible under the aegis of powerful states. Yet older mapping practices persisted: Enlightenment cartography encompassed a wide variety of processes for making, circulating, and using maps of different types. The volume's more than four hundred encyclopedic articles explore the era's mapping, covering topics both detailed—such as geodetic surveying, thematic mapping, and map collecting—and broad, such as women and cartography, cartography and the economy, and the art and design of maps. Copious bibliographical references and nearly one thousand full-color illustrations complement the detailed entries.

Praise for the *History of Cartography* series

“It is the most ambitious overview of map making ever undertaken. . . . People come to know the world the way they come to map it—through their perceptions of how its elements are connected and of how they should move among them. This is precisely what the History is attempting by situating the map at the heart of cultural life and revealing its relationship to society, science, and religion. . . . It is trying to define a new set of relationships between maps and the physical world that involve more than geometric correspondence. It is in essence a new map of human attempts to chart the world.” —*New York Times*

“An astounding example of intellectual range and creativity. It is expanding our understanding of maps and the societies and cultures that produced them. The individual volumes are magisterial in tone, full of fascination, and extremely well produced.” —*History*

“As well as enlarging the mind and lifting the spirits through the sheer magnitude of its endeavor, the collection delights the senses. . . . The maps are so beguiling in the tantalizing glimpses they offer of other, seemingly comprehensible, worlds, that the sight of them will stir the connoisseur in even the most guarded scholar.” —*Geographical Review*
